### **Data Source and Methodology**

Each year, the U.S. Department of Housing and Urban Development (HUD) receives custom tabulations of American Community Survey (ACS) data from the U.S. Census Bureau. These data, known as the "CHAS" data (Comprehensive Housing Affordability Strategy), demonstrate the extent of housing problems and housing needs, particularly for low income households. The CHAS data are used by local governments to plan how to spend HUD funds, and may also be used by HUD to distribute grant funds. For more background on the CHAS data, including data documentation and a list of updates and corrections to previously released data, please visit [www.huduser.gov](http://www.huduser.gov)

This measure is generated using the Consolidated Planning / CHAS Data from HUD's Office of Policy Development and Research. These data are available from [www.huduser.gov](http://www.huduser.gov). On September 2019, 2021, HUD released updated CHAS data for the 2014-2018 period which uses ACS data from that period.

These data are aligned to the 2010 census tract boundaries, but utilize the 2014-2018 ACS 5-year estimates. The primary estimate of percent of "cost-burdened very low-income renters" is calculated tabulating measures from Table 8 of CHAS data by aggregating together all renters under 50% of the HAMFI (Household Area Median Family Income) who pay 30% or more in income on housing expenses.
